Matthew Botello

Full Stack Developer - Java, Angular, PostgreSQL, AWS

Summary

Full-Stack Developer specializing in Java, Spring Boot, and Angular applications. My current interests include containerized applications and scalable backend architecture. I have 5+ years of industry experience and have built applications for the education, small business, and web services sectors.

EXPERIENCE

Freelance Full Stack Developer – bot.Ello Development

- January 2021 to Current

- Delivered custom websites and applications for business clients
- Built backend services using Java, Spring Boot, and REST APIs
- Developed frontend interfaces using Angular, JavaScript, HTML, and CSS
- Provided SEO consulting and performance optimization for improved website visibility

Recent Projects:

My Grade Tracker App (Code | View Site) - A full-stack student and grade management application built using Java Spring Boot and Angular, designed to track academic performance and manage coursework.

Landon Hotel Booking System (Code) - A full-stack Java Spring Boot and Angular application developed to modernize a legacy hotel reservation system and support scalable backend services. The project introduced new RESTful APIs, multithreaded backend functionality, and containerized deployment.

Vacation Planner Mobile App (Code) - A native Android mobile application built in Java that allows users to manage vacations and excursions while receiving real-time reminders and alerts.

Web Developer – BrandUs, Inc.

- April. 2024 to Current

- Developed and maintained 10+ responsive websites, increasing engagement and usability
- Implemented SEO improvements, including metadata optimization and structured content
- Collaborated with designers and stakeholders using Agile workflows
- Managed CMS updates, debugging, and feature improvements across multiple projects
